EDUCATION

Bachelor of Science (Computer Science) - UNSW Sydney

January 2020 - December 2023

Skills: Python (Flask), C, C++, Rust (Actix), PostgreSQL, JavaScript/TypeScript, React, Docker, Vercel, Java

Graduated with 86.5 (High Distinction) WAM, UNSW Co-op Scholarship program (2020-2023).

Awarded Engineering Dean's list (2020-2023), 2nd place WIT hackathon (2021), 4th place CSESoc hackathon (2022).

Volunteered as a Peer Mentor (2021) and StuNet Subcommittee (2020) to introduce first year and postgraduates to CSESoc.

PROFESSIONAL EXPERIENCE

Amazon Web Services

Software Development Engineer II

April 2026 – Present

Software Development Engineer I

August 2024 – March 2026

Skills: AWS (Step Functions, Lambda, ECS, S3, CDK), Networking Fundamentals (BGP, IP), Internal Amazon tooling

- Collected requirements for, defended, implemented and maintained a service from scratch which listens for alarming situations and alerts a network engineer if the situation persists. This went through a design and calibration process using data from real-world situations to ensure reliability.
- Founded and iterated on a second project serving as a central data store, creating schemas which ensure flexibility in the data while maintaining expressiveness within a networking domain.
- Led an effort to clean up technical debt identified by automated processes by diving deep into clarifying the security issues and advocating for their importance.
- Mentored an intern to design, implement and showcase a front-end application using React.js and internal tooling with associated new API endpoints for an existing product owned by the team, earning them a return offer. Maintained their project and iterated on it to provide a platform for adjacent teams to create their frontend applications and while maintaining a cohesive interface over them.

Nine Entertainment – Associate Data Engineer

February 2024 – August 2024

Skills: JavaScript/Typescript, GCP (Composer, Cloud functions, BigQuery, Composer, Cloud Run, BigQuery), Terraform

- Worked cross-functionally to deploy managed Composer instances for many data teams' use; supporting their migration off a deprecated composer 1 shared instance, creating replicable IaC environments, and leveraging local development.
- Reduced GCP costs by over 10% (over \$100,000) by cataloguing confusing areas of spend and raising it with owners.

Amazon Web Services – Software Development Engineer Intern

December 2022 – May 2023

Skills: AWS (Redshift, Lambda, Route53, S3, CDK, Cloudformation, RDS Aurora, EC2), Pandas, Numpy, sklearn

- Designed, defended and implemented an extensible system architecture to analyse any team's on-call alerts for patterns.
- Saved 2 hours of weekly churn in manual data processing by senior engineers.

Nine Entertainment – Data Engineering Intern

May 2022 – December 2022

Skills: JavaScript/Typescript, CSS, HTML, React, AWS (S3), GCP (Composer, Serverless functions, BigQuery, Composer), Looker Studio, Tag Manager

- Analysed and collected data from applications ranging from the SMH, the Age, and 9Now to find statistics on user events such as page views, and found user stories for tracking what users enjoy about products.
- Started and handed off a project over 1 month to re-architect a data team's infrastructure in GCP by leveraging Composer and Docker, to support local development and to deliver cost savings and reliability improvements.

Computer Science and Engineering, UNSW Sydney – Casual Tutor (COMP1531 & COMP6991)

January 2022 – May 2024

Skills: JavaScript/Typescript, Git, Gitlab, Linux, NodeJS (Express)

- Guided students working in groups, and familiarity with software engineering tools such as git and JavaScript in COMP1531. Taught Rust fundamental concepts and how it compares to other languages in COMP6991.
- Created the technical final exam for 1531 sat by 700 students, fielding forum questions and marking.

PROJECTS

CSESoc Projects – Circles Director

January 2022 – January 2023

Skills: JavaScript/Typescript, CSS, HTML, React (Redux), AntV, Python (FastAPI), PostgreSQL, MongoDB, Docker

- Completed and integrated, then deployed and maintained application operating a FastAPI python back-end, and a React/Redux front-end, which aids UNSW students in creating a degree plan and check its validity.
- Transformed project's culture to through improvement of documentation and adopting standard tooling and practices.
- Became the most visited student-run website at UNSW in 2022, with 30k page views over the year.
